Awards

- Entrepreneurship and innovation by Growin. 2016

White Papers

- Data warehouse.(PT)

Projects

- 2017-Present Software development adapted to the needs of the functional areas and business of BPI, with more focus on the branch office applications and credit management applications.
- 2016-Present Development of a newer version for the client area for Primavera ERP. The new version follows the SAAS architecture to better management of clients and more flexible on the future and contemplates new dashboard with new metrics for middle management and top management.
 - 2015/11-2017/06 Software development adapted to the needs of the functional areas and business of COFIDIS, to ensure their proper functioning and potentiate the increase effectiveness in the organization.
- 2015-2016 Web application to generate reports, consulting and supply information over a Primavera ERP system. This project tries to reduce the distance between the clients and the accountant and has information about their financials on-demand. This way we created a middle platform between them where they can interact without the usual channels like emails or calls.
- 2013-2016 Android management framework. The objective of this project is transform large and separated management systems into a unique and lightweight application.
- 2013-2016 Ninho dos Dragões is a technological project where I developed functions of project manager and software engineer.

Volunteer Experience

- Food distribution to homeless.
- Medical care and clothes distribution in Morocco
